Cook Green Biomass Stove

The unique
“Health Blessings” Stove

**Prevents kitchen
smoke poisoning
in rural households!**

MODERN BIOMASS CLEAN COOKSTOVES

Nearly 3 billion people in the developing world cook food and heat their homes with traditional cookstoves or open fires. This is the major cause of:

- Childhood pneumonia
- Lung cancer
- Emphysema
- Chronic obstructive pulmonary disease (COPD)
- Cataracts and blindness in women
- Low birth-weight babies and premature child deaths burn injuries & deaths.

13 Lakh women & children are dying every year in rural India, owing to the poisonous smoke from the old-style open fire-cookstoves!

We offer a perfect solution to this deadly problem! Our energy efficient and clean burning stove is called : the **Cook Green Bio Stove** or the “CGB” Stove.

“Health Blessings” Stove

“Health Blessings” Stove is a “Clean Cookstove” which consumes less fuel.

It consumes only 300 to 400 grams of any type of small wood chips, dry sticks & stems, cotton sticks and arhar sticks etc & provides energy efficient flame from 30 minutes to one hour depending on the density of the fuel material put into the chamber.

Further, if the housewife wants to cook for a longer time, all she needs to do is to add a few more sticks for prolonging the burning of the stove since the flames will continue unabated. This is indeed a great convenience, since any type of sticks can be used.

Above all, the “Health Blessings” stoves drastically reduce the poisonous & polluting smoke in the kitchen area and thus protect the health & save the lives of women & children in the poor rural villages and small towns.

Another benefit is that the cooking can be finished quicker and the spare time may be used by the housewife for some other work.

Thus, these stoves are a “True Blessing” for the rural Housewife and her children!
